

DIVYUM BHUMRA

Lead Engineer | AI-Native Product Engineering | Frontend Architecture

Remote, India • divz7777@gmail.com • divyumbhumra.com

LEADERSHIP PROFILE

Product-minded Lead Engineer with 7+ years owning customer-facing software from ambiguous requirements through architecture, implementation, UAT, and production. Deep React and TypeScript background across healthcare, assessment, and education platforms, with product ownership spanning discovery, PRDs, user flows, and release planning, and experience leading distributed teams across product, design, backend, and QA. Works in an AI-native engineering model—agentic coding workflows, context engineering, and multi-agent orchestration—to take on larger implementation scopes while architecture, technical review, and production decisions stay human-owned, with spec-driven development and Playwright-based verification gates holding the quality line.

CORE EXPERTISE

Product leadership	Discovery, PRDs, user flows, roadmaps, prioritization, feature scoping, customer feedback, release planning
Engineering leadership	Technical strategy, system design, technical architecture, architectural ownership, mentoring, code review, estimation, cross-functional influence
AI-native engineering	Agentic coding workflows, multi-agent orchestration, context engineering, spec-driven development, prompt engineering, structured task decomposition, human-in-the-loop engineering, agentic QA, AI-assisted software delivery, Claude Code, OpenAI Codex, gstack
Frontend architecture	React, TypeScript, JavaScript (ES6+), Next.js, Vite, Redux, Chakra UI, Storybook, HTML, CSS/Sass, Web APIs, performance engineering, accessibility
Quality & verification	Playwright, E2E automation, verification harnesses, Jest, regression testing, UAT gates, release validation, production validation, observability, Web Vitals
Delivery & platforms	Agile/Scrum, Jira, backlog refinement, dependencies, milestones, defect triage, CI/CD, Nx, Webpack, Auth0, Azure App Service

PROFESSIONAL EXPERIENCE

Senior Software Engineer / Lead Engineer | Denim Health 2023–Sep 2026
Remote, India

- Progressed into a lead frontend and product role in 2025, owning initiatives end-to-end—client discovery, requirements, PRDs, user flows, and technical planning through implementation, QA, UAT, production rollout, and post-release support.
- Led frontend architecture and delivery with React, TypeScript, Vite, Chakra UI, Auth0, and Playwright, staying hands-on across implementation, debugging, refactoring, and UX decisions.
- Built complex healthcare workflows on a platform used by hundreds of agents, spanning providers, practices, insurance, search, filters, maps, schedules, closures, and operational data.
- Contributed to conversational AI experiences handling large patient-call volumes, aligning frontend behavior, product decisions, and operational edge cases across the flow.
- Reduced frontend API traffic in critical workflows from 40+ requests to approximately 10–12 by redesigning data fetching and client-side orchestration, improving responsiveness and simplifying the frontend data architecture.
- Designed an AI-native software delivery workflow using Claude Code, Codex, and gstack, orchestrating specialist agents across spec analysis, architecture, implementation, refactoring, code review, browser QA, and release preparation while retaining ownership of architecture and production decisions.
- Established Playwright end-to-end coverage for critical user journeys and grew it into a verification harness—explicit acceptance criteria, automated browser checks, and UAT gates—that raised release confidence, cut manual regression effort, and let AI-assisted implementation run at higher velocity without bypassing quality controls.
- Applied context engineering and structured task decomposition to parallelize feature work across specialist agents, compressing implementation cycles and shifting effort toward specification, architecture, review, and system-level decisions.
- Built internal observability and product analytics instrumentation, giving product and client stakeholders visibility into workflow health, adoption, and failure patterns.
- Partnered directly with client stakeholders to understand operational workflows, turn feedback into prioritized product decisions, resolve production issues, and align upcoming releases.
- Drove sprint execution in Jira—refinement, prioritization, estimation, dependencies, milestones, defect triage, release readiness—and coordinated UAT validation, production rollouts, and cross-functional release communication.

Software Development Engineer 3 | CAW Studios

Oct 2022–Jun 2023

Hyderabad, India

- Led frontend development and architecture for Calibrate, a multilingual coding-assessment platform with proctoring, candidate verification, cheating detection, live hiring events, and an autocomplete-enabled coding environment; the platform supported live hiring events and attracted 10,000+ users.
- Shaped product strategy, feature prioritization, and technical direction while owning sprints and the Jira board, translating hiring-workflow requirements into scoped, shippable releases.
- Led a cross-functional team of 3–4 frontend engineers, 2 QA engineers, and 1 designer; mentored engineers, ran code reviews, and coordinated production deployments.
- Established the frontend foundation for Celito, a B2B biotech SaaS product, selecting React, TypeScript, Fluent UI, webpack, Storybook, and an MVC architecture to keep a new codebase consistent as the team grew.

Software Engineer | Topica Edtech Group

Nov 2021–Oct 2022

Gurugram, India

- Owned and delivered React and Next.js features for Edumall, a short-skills learning platform serving Thailand, Indonesia, and Vietnam.
- Drove a product-wide design refresh that strengthened the learner experience for a platform receiving 200,000+ site visits.

Frontend Engineer | Independent / Remote

Feb 2020–Sep 2021

India

- Built Zollege, a college-search platform, from the ground up with Next.js; the product grew to more than 2.5 million site visits.
- Delivered new workflows and translated Figma designs into production React interfaces for a hotel-management SaaS product.
- Built a React application for IceCap Group's loan-underwriting workflow and owned delivery through Azure Pipelines and Azure App Service.

UI Developer Intern | XenonStack

Jul 2019–Jan 2020

Chandigarh, India

- Revamped XenonStack's careers portal with React, Redux, and Sass, contributing to a 5x increase in job applications.
- Developed and documented reusable design-system packages; added unit coverage with Jest and Enzyme and automation coverage with Taiko.

AI-NATIVE ENGINEERING SYSTEM

How AI-assisted delivery is structured in practice, from specification to production ownership.

Specification	Requirements and PRDs translated into explicit specs, acceptance criteria, and decomposed workstreams before any agent runs
Context	Curated repository context, conventions, constraints, and prior decisions supplied to agents, rather than one-shot prompting
Orchestration	Specialist agents assigned distinct responsibilities—spec analysis, architecture, implementation, debugging, refactoring, code review, browser and Playwright QA, release preparation—and run in parallel where work is independent
Verification	Automated checks, Playwright E2E suites, browser validation, and UAT gates that every agent-assisted change must clear
Human ownership	Problem definition, architecture, system boundaries, technical review, testing strategy, release quality, and production decisions stay with the engineer

LEADERSHIP BEYOND ENGINEERING

President | Rotaract Club Chandigarh Himalayan

Jun 2018–Jun 2019

Chandigarh, India

- Led an 800+ member service organization, overseeing programs, people policies, team structure, budgets, marketing, and external representation; raised INR 10 lakh for community initiatives.

Team Leader | Smart India Hackathon 2018, Government of India

Jan 2018–May 2018

National Finalist

- Led e-Rozgaar, an online file-tracking system for government offices, to the national finals from a field of 12,000+ teams.

EDUCATION

PG Diploma in Product Management, Pragmatic Leaders (Y Combinator-backed)

2021–2022

Bachelor of Engineering in Information Technology, UIET, Panjab University

2015–2019
